Installation Assignment Durations and Patterns of Army Personnel

1. SUMMARY

1.1 Purpose

The purpose of this document is to report on the development of personnel assignment duration statistical metrics and statistical descriptions for groups of Army personnel aggregated by rank, career management field, and other descriptors for 32 Continental United States (CONUS) Army installations. This information can be used for generating evidence-based measures of personnel exposure times associated with environmental health considerations at the installation and career management field levels.

1.2 Abstract

Assignment duration statistical descriptions were developed to provide temporal metrics for groups of personnel at Army installations as foundational data to support a variety of assessments. Statistical results of personnel assignment durations at the installation level are provided in several formats. The 50th percentile assignment duration represents the median number of days personnel in groups aggregated by rank and career management field spend at the 32 CONUS Army installations in this study. Likewise, other duration percentiles (90th) and quartiles of assignment durations for groups aggregated by rank and career management field spend at each installation were developed. Assignment path analysis provide statistical descriptions of assignment durations at Army installations throughout increments of time (e.g., 5 years, 10 years). Key groupings of assignment paths were achieved by analyzing the duration of assignments at installations in chronological order from entry throughout specified increments of military service to generate the most common assignment paths across the 32 CONUS Army installations in this study. The developed assignment duration analytics and duration statistical descriptions provide foundational temporal metrics for groups of personnel at 32 CONUS Army installations to support a variety of assessments including those by human resource planners and environmental health specialists.

2. REFERENCES AND TERMS

Appendix A provides the references cited and the Glossary provides a list of acronyms.

3. AUTHORITY

The U.S. Army Public Health Center (APHC) was asked to provide subject matter expertise and analysis support to the U.S. Army Environmental Command (USAEC) to develop Army personnel assignment duration analytics at 32 CONUS Army installations. Agreements were put in place in July 2018 to structure the support and analyses in Fiscal Years (FY) 2019 and 2020. Specifically, the following support agreements were established between USAEC, APHC, and the Oak Ridge National Laboratory (ORNL) of the Department of Energy (DOE) who collaborates with the USAEC and APHC on environmental health assessment efforts.

- Statement of Work, Army Personnel Time on Installation Data Analytics, FY 2019–2020, (Revision 0, 20 July 2018).
- Memorandum, Office of the Under Secretary of Defense (Acquisition, Technology, and Logistics), subject: Department of Defense - Wide Policy for Using the Department of Energy's Work for Others Program to Access DoE-Owned Research, Development and Production Facilities through Interagency Agreements, 1 May 2013.
- Memorandum, DOE ORNL, subject: Occupational and Environmental Health Assessment of Exposure and Risk for Multiple Hazards (DOE Proposal No. 2459-A038-15), 5 May 2015.
- Memorandum, DOE ORNL, subject: Risk, Toxicology, and Regulatory Assistance to the Army Environmental Command (DOE Proposal No. 2134-Z086-16, 19 September 2016).

4. BACKGROUND

The Army Personnel Installation Assignment Duration Data Analytics project is a collaborative effort between the USAEC, APHC, and ORNL. The primary purpose of the project is to derive “time-on-installation” (assignment duration) metrics and associated statistical information for both active component officer and enlisted personnel located on 32 CONUS Army installations. As part of the effort to improve Soldier health and readiness, analyses of Army personnel “time-on-installation” data including development of associated analytical methods and descriptive duration metrics are needed. Army personnel assignment data analytics and developed duration metrics provide temporal information for human resource planners and environmental health specialists for health and wellness strategies to improve the health of the Army community.

“Time-on-installation” data and analytics are also integral to enhancing efforts by environmental health scientists during development of Environmental Health Indicators (EHIs) for military installations. As environmental health scientists monitor air quality, water quality, the disposal of waste, and the prevalence of disease-carrying insects, temporal metrics of military personnel at a given installation are needed for a comprehensive assessment. “Time-on-installation” data and analytics provide foundational data that are key to improving strategies for monitoring environmental conditions and managing environmental risk as it relates to acute or chronic health impacts from interactions in a unique environment.

5. STUDY APPROACH AND OBJECTIVES

The analysis approach focused on two overall study objectives:

- Installation Level Analysis: The installation level analysis primary objective was to design and implement an analytical approach to query military personnel data and develop statistical descriptions of assignment durations at 32 CONUS Army installations for groups of personnel. Key groupings were achieved by combining individual personnel data according to Army rank, military occupational specialty (MOS), career management field (CMF) and or Personnel Management Division (PMD). Statistical analysis of assignment durations for a specified rank provides the average number of days personnel with that rank are stationed at a given installation.

Likewise, assignment duration statistical descriptions for a selected CMF provides the average number of days personnel with that CMF are stationed at a given installation.

- **Assignment Path Analysis:** The assignment path analysis focused on development of statistical descriptions of assignment durations at 32 CONUS Army installations throughout increments of time (e.g., 5 years, 10 years) that may constitute an assignment path for a period of military service. Key groupings of assignment paths were achieved by analyzing the duration of assignments in chronological order from entry throughout a period of military service. A combinatorial analyses approach looked at assignment durations over time to generate groups of paths based on frequency of assignments at installations to determine a hierarchy of chronologically explicit assignments over a 5- or 10-year period of military service (termed an assignment path). The resulting assignment paths and associated statistical descriptions provide temporal metrics at installations for periods of military service. The incremental assignment duration at a given installation over a period of time is the key metric for this analysis. The analysis is independent of progression in rank or changes in career management field over the period of military service.

6. METHODOLOGY

To achieve the study objectives, the project team designed a methodology for identifying and assimilating personnel assignment duration information and associated metadata at 32 CONUS Army installations, developing and implementing statistical analytical approaches, and generating results for the installation level and assignment path analyses as described below.

6.1 Army Personnel Data and Information

A key resource of relevant information and data to develop statistical descriptions of assignment durations for groups of military active component personnel at installations is maintained by the U.S. Army Analytics Group (AAG), Research Facilitation Laboratory in the secure cloud-based platform called the Personnel Data Event Environment (PDE). The PDE is a consolidated data repository that contains training, financial, health, and medical records covering U.S. military personnel (Active Duty, Reserve, and National Guard), civilians, contractors, and military dependents. These data assets provide a timeline capturing each Soldier's military experience from entry to separation from the armed forces.

Operationally, the PDE is a secure collaborative data environment that brings projects and analysts to the data. Standardized data elements among disparate person-event databases from both the Department of the Army and the Department of Defense (DOD) exist in an intelligence platform for conducting analyses and studies including statistical analysis. Within the PDE system exists an extensive governance structure for review and approval of projects, access to data, analysis plans, and review of results. Following established protocols for new projects, this project (Personnel Time on Installation Project (PTIP)) was approved by AAG in March 2019 with access to PDE. Further details on PTIP-specific datasets and analytics performed within PDE for this project are described in the following sections.

NOTE – All data analytics were conducted within the secure PDE enclave pursuant to the conditions set forth in the PTIP agreement between AAG and APHC. AAG reviewed all derivative data, statistical outputs, and summarized results prior to approval for export from the PDE. PTIP results approved by AAG for export from PDE are retained by APHC for determination of distribution by APHC.

6.2 Analytic Workflow within PDE

The PTIP analytic workflow consists of reviewing and selecting relevant databases within PDE, selecting key variables to support analyses, scripting queries to generate PTIP-specific datasets, performing statistical analyses of PTIP datasets, and generating results for review and export from PDE by AAG. Figure 1 shows an overview of the PTIP analytic workflow.

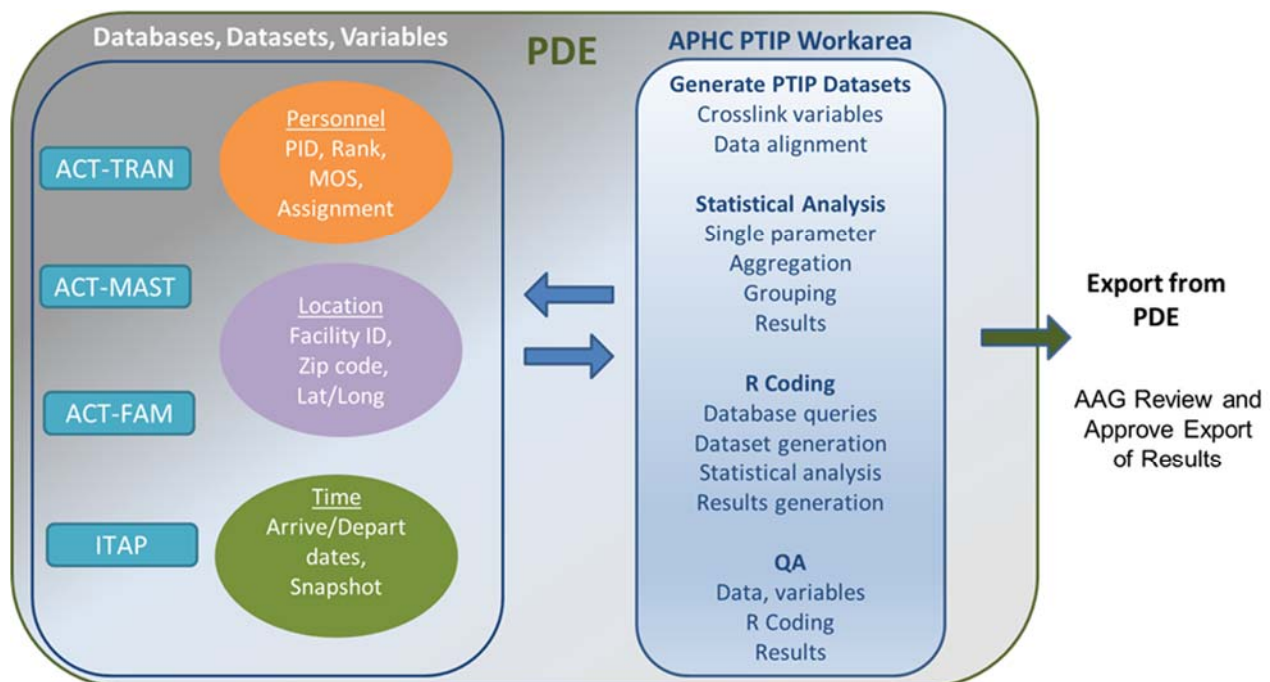

Figure 1. PTIP Analytic Workflow within PDE

To perform the installation level and assignment path analysis, databases in PDE were reviewed and the primary databases and key variables were identified to provide data on durations of personnel assignments at 32 CONUS Army installations. The primary PDE databases for PTIP analyses were:

- Active Duty Military Personnel Transaction (ACT-TRAN),
- Active Duty Military Personnel Master (ACT-MAST),
- Active Duty Family (ACT-FAM), and
- Integrated Total Army Personnel (ITAP).

Table 1 contains descriptions of these four databases. Data queries were scripted using the R Statistical Computing Environment within PDE to assimilate PTIP-specific datasets from information in the ACT-TRAN, ACT-MAST, ACT-FAM, and ITAP databases (see Figure 1). Key variables such as installation name and location, personnel assignment start and end dates, rank, and career management field (CMF) and military occupation specialty (MOS) designations were selected from these four databases to provide data for PTIP analyses. To ensure that each Soldier's identity is kept confidential, AAG analysts mask social security numbers and other personal identifiable information while creating a new personal identification number. This new identification number provided data linkage across various databases maintained in the PDE and allowed PTIP analysts to access and generate PTIP datasets within PDE. The PTIP-specific datasets provide relevant information to support the installation level and assignment path analyses.

Table 1. Descriptions of PDE Databases for PTIP Analyses

Database	Description
ACT-TRAN	Presents the 30 most commonly used columns of the Active Duty Personnel Transaction File. Each record in the file is a transaction record of an Active Duty Soldier's entrance, separation, or reenlistment in the Army within a specific time frame. It also contains data element change transactions such as name, pay grade and unit changes. By defaults requests for this item will only contain Army Active Duty personnel.
ACT-MAST	Provides an inventory of all individuals on active duty (excluding reservists on active duty) for the Army at a point in time.
ACT-FAM	This is an encoded version of the Reserve Duty Family File, where SSNs are masked with 12-character PDE Identifiers. The entity provides family and dependent data for Reserve Duty service members. The entity is constructed from a combination of the RCCPDS and relevant dependent data from the DEERS.
ITAP	A consolidated human resource database providing the Army and DOD with a single repository for personnel information for all components of the Army. The database includes demographic, career progression, awards, and limited favorable/unfavorable actions. This table records demographic data of service members over their careers.

Legend:

ACT-TRAN = Active Duty Military Personnel Transaction

ACT-MAST = Active Duty Military Personnel Master

ACT-FAM = Active Duty Family

ITAP = Integrated Total Army Personnel

PDE = Personnel Data Event Environment

SSNs = social security numbers

RCCPDS = Reserve Components Common Personnel Data System

DEERS = Defense Enrollment Eligibility Reporting System

DOD = Department of Defense

6.3 Installations and Study Period for Analysis

The installations for the PTIP analysis focused on the 32 CONUS Army installations and joint bases (JB) in the U.S. with an estimated minimum average annual population of 1,000 Army active component Soldiers (Table 2). These 32 CONUS Army installations and JB were also the primary state-side installations in the 2017 *Health of the Force* reporting which provides an evidence-based portrait of the health and well-being of the active component population on an annual basis (APHC 2020). *Health of the Force* reports reflect medical, wellness, and environmental data and assimilation of health metrics overall and by installation to assist leaders in health promotion and readiness programs. The PTIP analysis and metrics provide foundational information available to support Army efforts such as the *Health of Force*.

Based on discussions and guidance from AAG regarding PTIP-relevant duty assignment information and data, the PTIP focused on a study period of 2000–2018. This 18-year period provides a representative snapshot of active component assignments at Army 32 CONUS installations and JB for this study. Further, personnel assignment and duty location information were reviewed and assimilated for the study period to ensure assignment records were complete with regard to installations and duty assignment durations and that assignment durations were in chronological order. Approximately 1.1 million records from 2000–2018 were screened for completeness of PTIP-relevant information, including assignment arrival and departure dates at specified installations, and assignment records assembled in chronological order. The screening also ensured that other assignment- and installation-related variables were valid. After screening, over 840,000 records were assimilated within PDE from the study period of 2000–2018 as the subset of data for the PTIP installation level and assignment path analyses.

Table 2. Army Installations and Joint Bases for PTIP Analyses

Aberdeen Proving Ground	Fort Irwin	Fort Stewart
Fort Belvoir	Fort Jackson	Fort Wainwright
Fort Benning	Fort Knox	Presidio of Monterey
Fort Bliss	Fort Leavenworth	USAG Hawaii
Fort Bragg	Fort Lee	USAG West Point
Fort Campbell	Fort Leonard Wood	JB Elmendorf-Richardson
Fort Carson	Fort Meade	JB Langley-Eustis
Fort Drum	Fort Polk	JB Lewis-McChord
Fort Gordon	Fort Riley	JB Myer-Henderson Hall
Fort Hood	Fort Rucker	JB San Antonio
Fort Huachuca	Fort Sill	

Legend:

USAG = U.S. Army Garrison

JB = Joint Base

NOTE – The analysis and metrics for the five JB in this study focused only on the Army component and included the Army missions aligned with each JB.

6.4 Assignment Duration Statistical Methods

Statistical analyses for PTIP were performed on groups or aggregates of data records. Specifically, for a defined group (aggregated by rank, MOS, CMF) and installation of interest, the R project software (The R Foundation, 2013) in PDE was utilized for statistical analyses and graphics. R scripts were written to determine how long individuals within a defined group were at the installation during each assignment. This is termed “assignment duration.” The built-in statistical functions in R were scripted to calculate summary statistics such as the mean number of days that a group spent at the installation, the standard deviation of the number of days that a group spent at the installation and the median number of days that a group spent at the installation. Also, other statistical descriptions such as quartiles or percentiles for assignment durations were calculated. Results were reported only in aggregate in both tabular and graphical form. Strata having 50 or fewer observations were not to be reported.

NOTE – All data analytics were conducted within the secure PDE enclave. AAG reviewed all derivative data, statistical outputs, and summarized results prior to approval of export from the PDE.

7. RESULTS AND DISCUSSION

Results of the analysis are provided for the installation level analysis and the assignment path analysis in tabular and graphical form. It is important to note the objectives of this study are to develop foundation data and temporal metrics of assignment durations at 32 CONUS Army installations and JBAs. Comparisons between installations and among the groups of rank or CMF are mentioned briefly and provide the basis for follow-on studies and interpretation.

7.1 Installation Level Analysis

The installation level analysis developed statistical descriptions of assignment durations at installations for groups of personnel. Key groupings were achieved by combining individual personnel data according to Army rank, MOS, CMF and PMD.

7.1.1 Assignment Duration Statistical Descriptions by Army Rank

Statistical descriptions of assignment durations for personnel at each installation were developed based on the duration of assignment as determined by Army rank. Personnel assignment durations for a selected rank were aggregated into groups for statistical analysis. As shown in Table 3, enlisted ranks were aggregated into three groups, officer ranks were aggregated into three groups and warrant officers were aggregated into one group. Assignment duration statistical descriptions for each group (seven rank groups) were developed for the 32 CONUS installations in this study (Table 2).

Table 3. Army Rank Grouping for Assignment Duration Statistical Analysis

Group	Army Rank
Enlisted (E1–E4)	E1 Private (PV1) E2 Private (PV2) E3 Private First Class (PFC) E4 Corporal (CPL) E4 Specialist (SPC)
Enlisted (E5–E6)	E5 Sergeant (SGT) E6 Staff Sergeant (SSG)
Enlisted (E7 and above)	E7 Sergeant First Class (SFC) E8 Master Sergeant (MSG) E8 First Sergeant (1SG) E9 Sergeant Major (SGM) E9 Command Sergeant Major (CSM) Senior Enlisted Advisor, Sergeant Major of the Army (SMA)
Officer (O1–O3)	O1 Second Lieutenant O2 First Lieutenant O3 Captain
Officer (O4–O6)	O4 Major O5 Lieutenant Colonel O6 Colonel
Officer (O7 and above)	O7 Brigadier General O8 Major General O9 Lieutenant General O10 General Special General of the Army
Warrant Officer (W1–W5)	W1 Warrant Officer 1 (WO1) W2 Chief Warrant Officer (CW2) W3 Chief Warrant Officer (CW3) W4 Chief Warrant Officer (CW4) W5 Chief Warrant Officer (CW5)

Results for the installation level duration analysis of Army rank groups are presented in several formats. The first format presents the 50th percentile assignment duration (days) by rank group for the 32 CONUS installations in this study. Figures 2–8 present results for Enlisted (E1–E4), Enlisted (E5–E6), Enlisted (E7 and above), Officer (O1–O3), Officer (O4–O6), Officer (O7 and above), and Warrant Officer (W1–W5) groups, respectively.

As an explanation, Figure 2 shows the median number of days that the Enlisted (E1–E4) group spends at each of the 32 CONUS installations. The Enlisted (E1–E4) group has the shortest median assignment duration at Fort Jackson (~ 90 days) compared to the longest duration at

USAG West Point of ~500 days. Similar explanations apply to the results for the other six rank groups shown in Figures 3–8. Overall, the 50th percentile assignment duration (median number of days) represents foundational data that personnel in the enlisted, officer, and warrant officer groups spend at each installation.

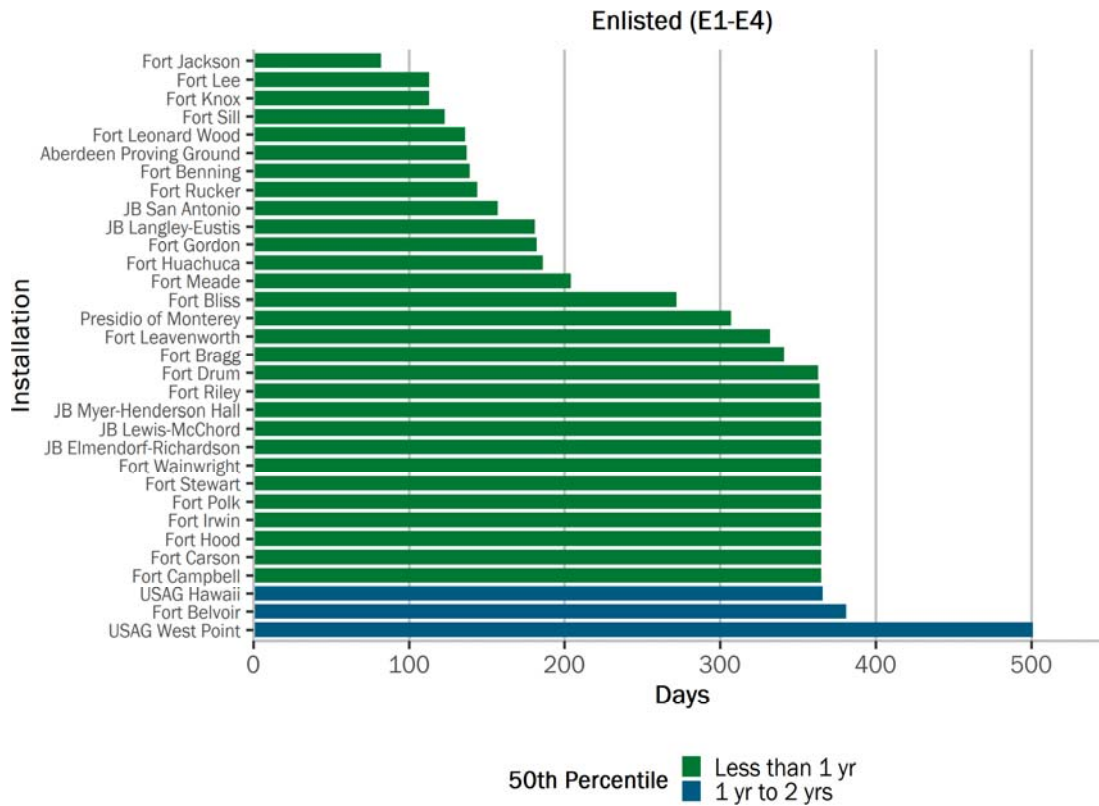

Figure 2. Enlisted (E1–E4) Assignment Durations for 32 CONUS Army Installations

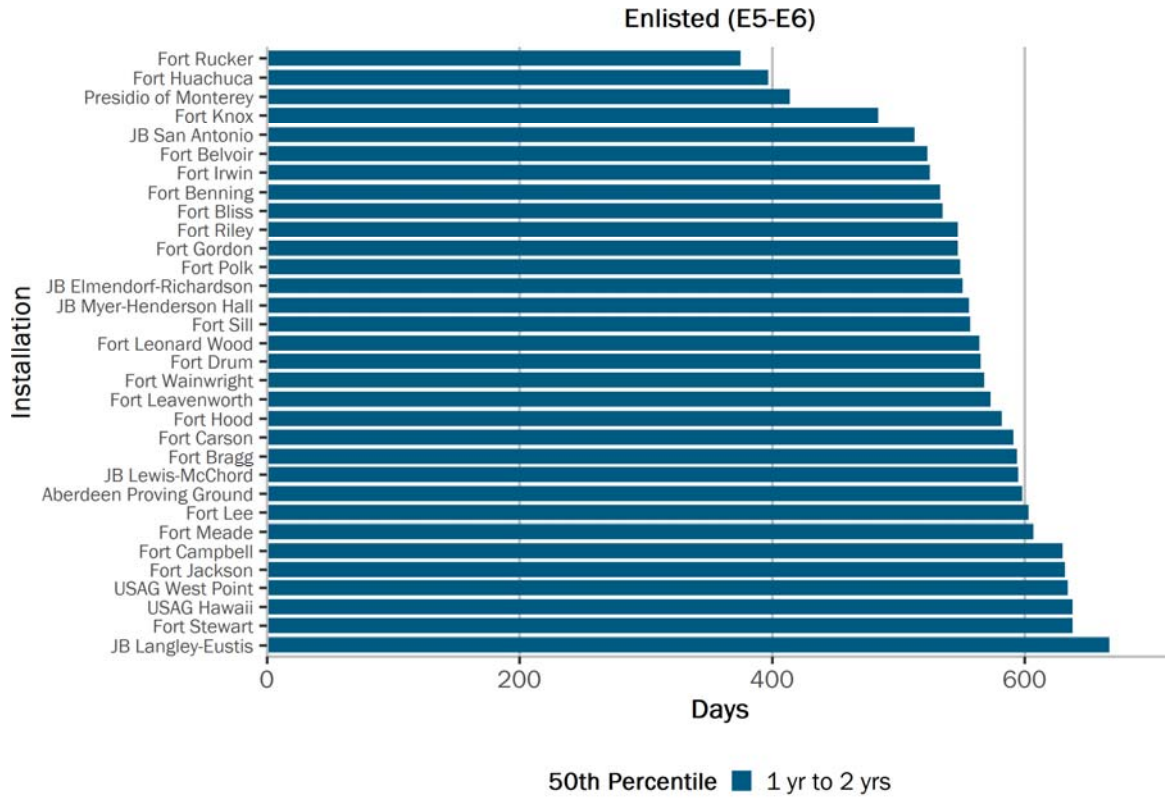

Figure 3. Enlisted (E5–E6) Assignment Durations for 32 CONUS Army Installations

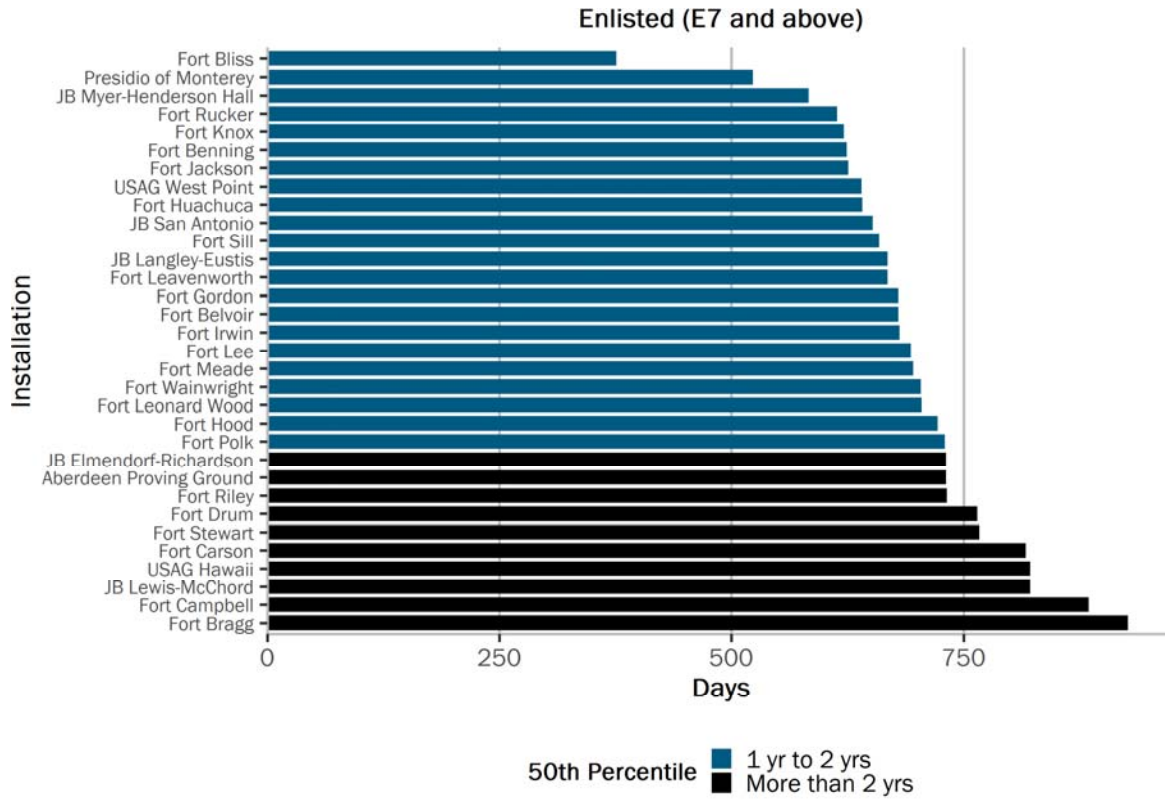

Figure 4. Enlisted (E7 and above) Assignment Durations for 32 CONUS Army Installations

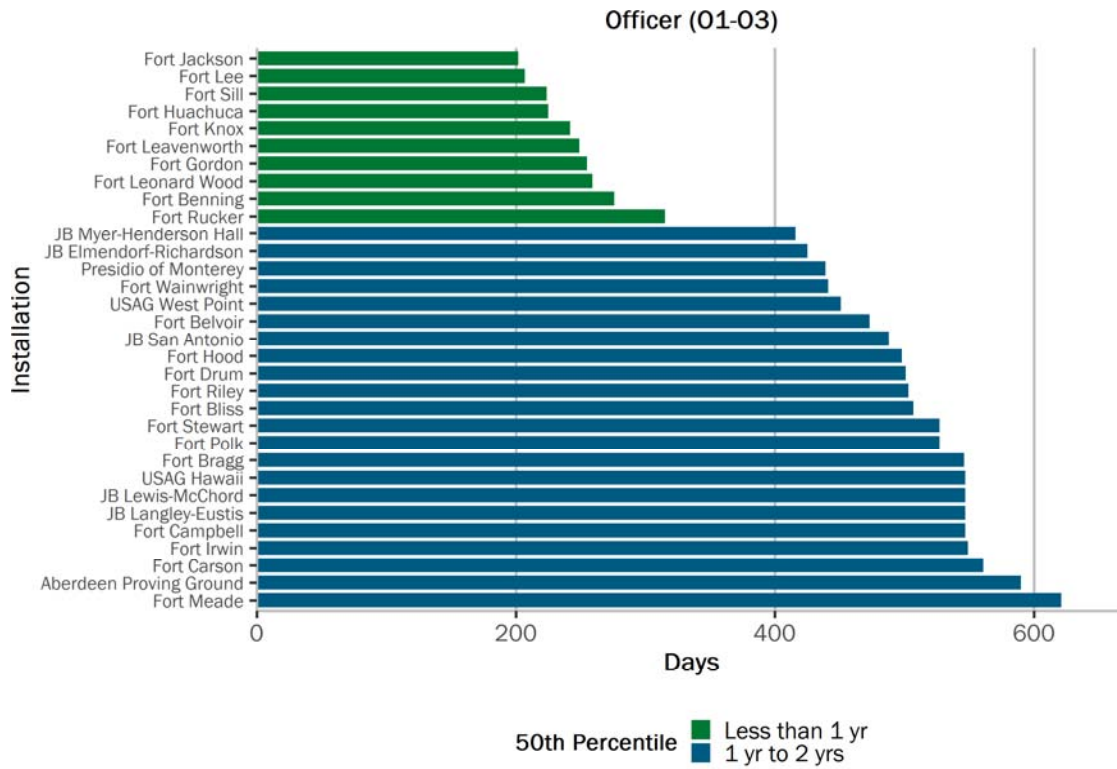

Figure 5. Officer (01–03) Assignment Durations for 32 CONUS Army Installations

Figure 6. Officer (O4–O6) Assignment Durations for 32 CONUS Army Installations

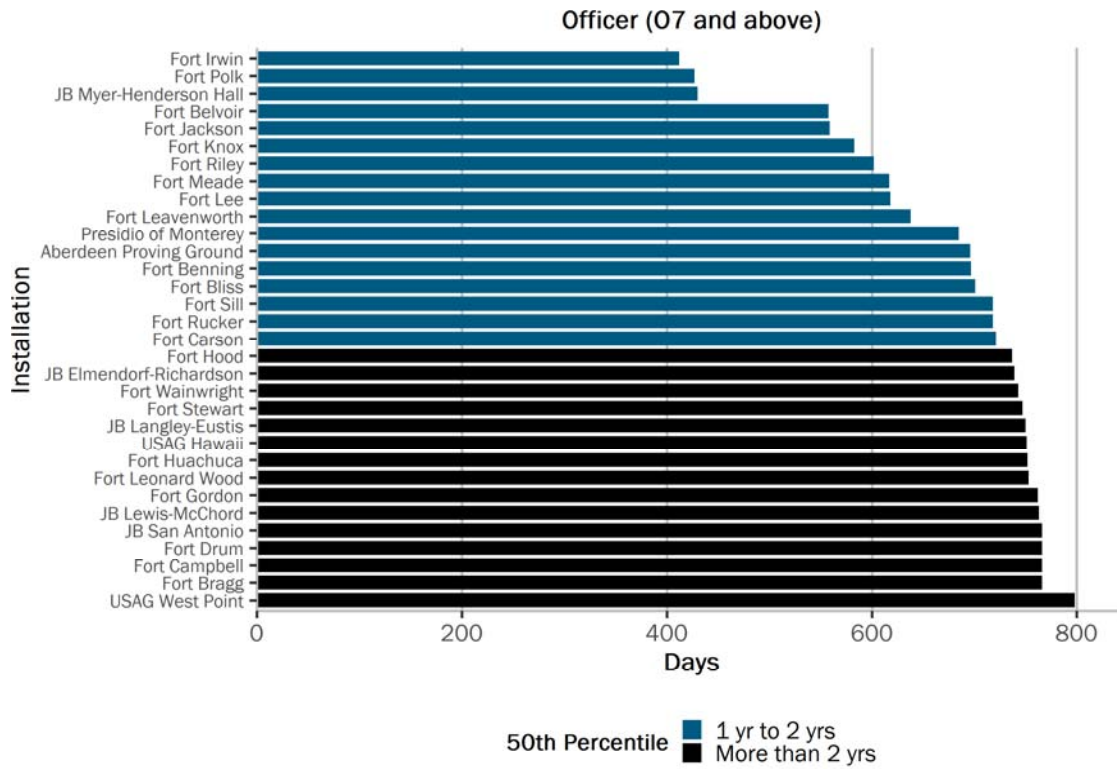

Figure 7. Officer (O7 and above) Assignment Durations for 32 CONUS Army Installations

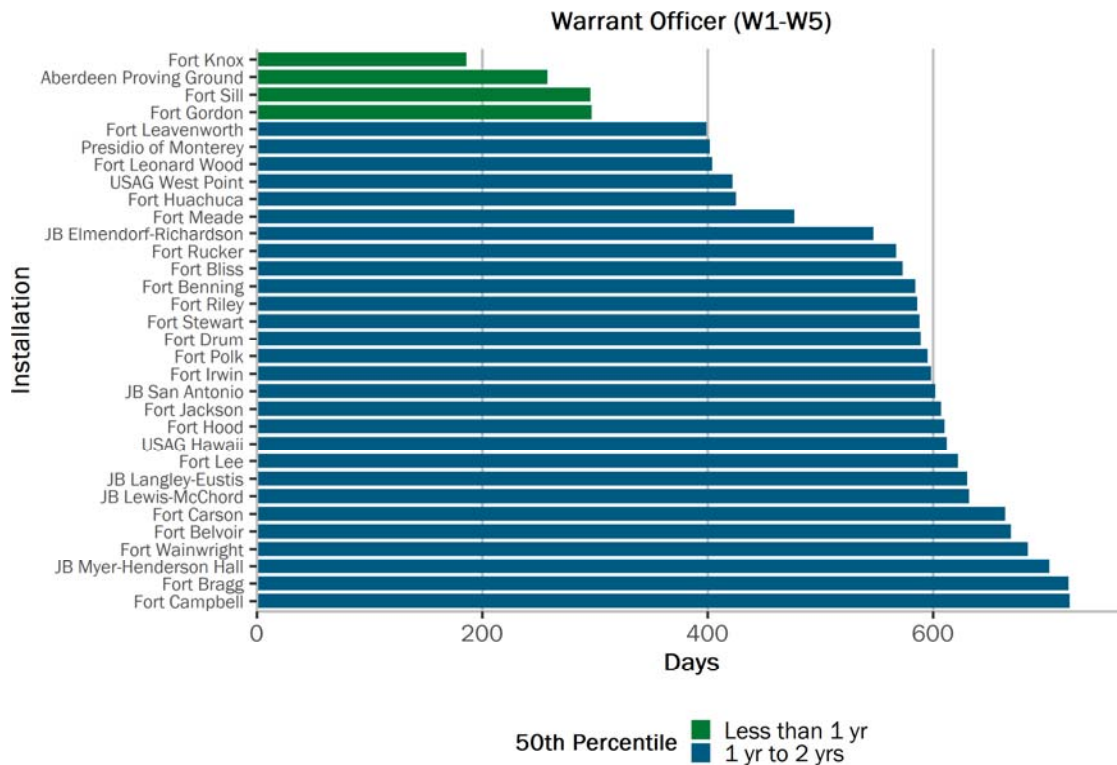

Figure 8. Warrant Officer (W1–W5) Assignment Durations for 32 CONUS Army Installations

The second format of rank analysis results is box and whisker plots presenting the assignment duration quartiles for rank groups at each installation. In these plots, the median number of days is the black horizontal line in the box with vertical lines representing the shortest and longest durations for each installation. The squares on the plots are Enlisted groups: Enlisted (E1–E4), Enlisted (E5–E6), Enlisted (E7 and above); the circles are Officer groups: Officer (O1–O3), Officer (O4–O6), Officer (O7 and above); and the triangle is the Warrant Officers (W1–W5). For ease of presentation, four installations are shown in each figure (Figures 9–16).

For example, Figure 9 shows the assignment duration quartiles for rank groups at Fort Bragg, Fort Campbell, Fort Stewart and JB Lewis-McChord. The Enlisted (E1–E4) group exhibits the shortest median assignment duration (less than 200 days) at these four installations with the Enlisted (E7 and above) group exhibiting the longest assignment durations (greater than 750 days). Similar explanations apply to the plots of duration assignment quartiles at each installation as shown in Figures 10–16. Although these plots provide readers the opportunity to compare and contrast among installations, those types of analyses can be conducted in follow on efforts as the goal of this study is to generate foundational assignment duration statistical descriptions at Army installations.

Figure 16. Assignment Durations for Rank Groups at Aberdeen Proving Ground, Fort Meade, JB Langley-Eustis, and JB San Antonio

The third format of rank analysis results presents the 50th and 90th percentiles of assignment durations (days) for each rank group at each installation. Results for each of the 32 CONUS Army installations are shown in Figures 17–24.

As an explanation, Figure 17 shows the 50th and 90th percentiles of assignment durations for each rank group at Fort Bragg, Fort Campbell, Fort Stewart, and JB Lewis-McChord. The Enlisted (E1–E4) group spends the shortest time (median number of days) at each of these installations compared to other rank groups. The Enlisted (E7 and above) group spends the longest time (median number of days) at each of these installations compared to other rank groups. The 90th percentile of time spent by rank groups is also provided. Similar explanations apply to rank group assignment durations at other installations as shown in Figures 18–24. Overall, the 50th and 90th percentiles of assignment durations for rank groups at installations represent foundational data of the length of time (days) that the enlisted, officer, or warrant officer group spend at each installation. These percentiles provide temporal metrics for rank groups at Army installations to support a variety of assessments including those by human resource planners and environmental health specialists.

7.1.2 Assignment Duration Statistical Descriptions by Army CMF and PMD

The U.S. Army Human Resources Command designates active component personnel according to PMD and CMF. The PMDs of Operations, Operations Support, and Force Sustainment are comprised of several CMFs which are the focus of this study. Further, each CMF contains multiple MOSs. For PTIP analysis, personnel assignment durations for specified MOS were aggregated into corresponding CMF for statistical analyses as defined in Table 4. Statistical descriptions of assignment durations were determined by CMF at each of the 32 CONUS installations in this study (Table 2).

NOTE – The MOS column in Table 4 depicts representative MOS for that CMF and is not the comprehensive list of MOS assigned to each CMF.

Table 4. Army Career Management Fields for Assignment Duration Statistical Analysis

PMD	CMF	MOS ^a
Operations	Air Defense Artillery	Air and Missile Defense Officer/Tactician/Operator/Crew
	Armor	Armor Crew, Calvary Scout
	ARSOF	Special Forces
	Aviation	Pilot, Aviation Maintenance/Repair, Unmanned Aircraft, Aviation Arms Operations, Air Traffic Control Operator
	Field Artillery	Field Artillery, Cannon Crewmember, Launch Rocket Systems
	Infantry	Infantry, Infantry Officer
Operations Support	Chemical	Chemical, Biological, Radiological and Nuclear Specialist
	Cyber	Cyber Operations, Space Operations
	Engineer	Engineer, Firefighter, Electrician, Surveyor
	Military Intelligence	Intelligence Officer/Technician, Analyst, Signal Intelligence, Counterintelligence, Interpreter, Translator, Linguist
	Military Police	Military Police, Working Dog Handler
	Public Affairs	Public Affairs, Mass Communication Specialist
	Signal	Information Technology Engineer/Specialist, Signal Analyst/Specialist, Network/Satellite Communications
Force Sustainment	Health Services	Doctor, Surgeon, Medic, Nurse, Dentist, Environmental Health Specialist, Veterinary Medicine
	Ordnance	Ammunition Specialist, EOD Specialist, Materiel Maintenance and Munitions, Small Arms, Missile Systems, Electronics
	Quartermaster Corps	Acquisition, Logistics and Technology, Food Service, Shower/Laundry/Clothing Specialists
	Solider Support	Human Resources, Counseling, Chaplain, Legal, Judge Advocate
	Transportation	Transport Operators, Cargo Specialist, Logistician

Legend:

PMD = Personnel Management Division

CMF = Career Management Field

MOS = military occupational specialty

ARSOF = Army Special Operations Forces

EOD = Explosives Ordnance Disposal

Note:

^a Representative MOS for each CMF

Results for the CMF and PMD assignment duration analysis are presented in two formats. The first format of results presents the 50th percentile assignment durations (days) by CMF for the 32

CONUS Army installations in this study. Figures 17–34 present results for each of the 18 CMFs listed in Table 4.

As an explanation, Figure 17 shows the median number of days that personnel in the Air Defense Artillery CMF spend at each installation. Personnel in Air Defense Artillery CMF have the shortest median assignment duration at Fort Jackson (~ 100 days) compared to the longest duration at USAG Hawaii of ~950 days. Similar explanations for the other 17 CMFs apply to Figures 18–34. Overall, the 50th percentile assignment duration (median number of days) represents foundational data of the days that personnel in that CMF spend at each installation.

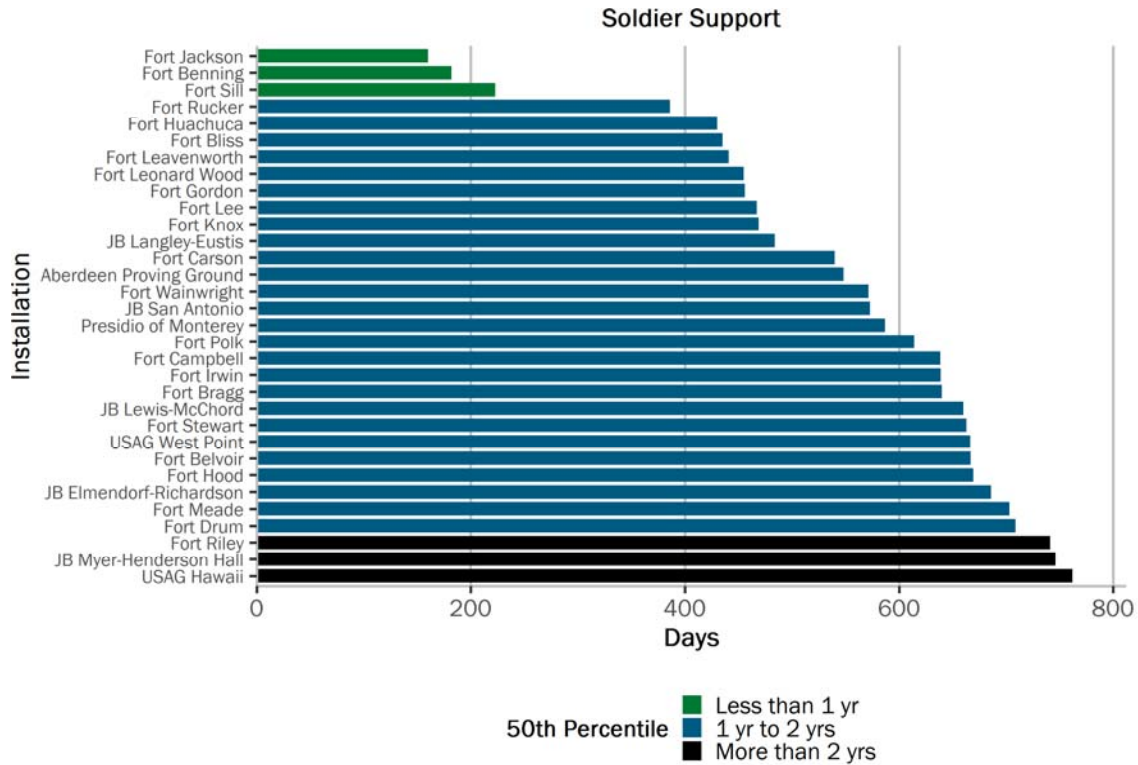

Figure 41. Solider Support CMF Assignment Durations for 32 CONUS Army Installations

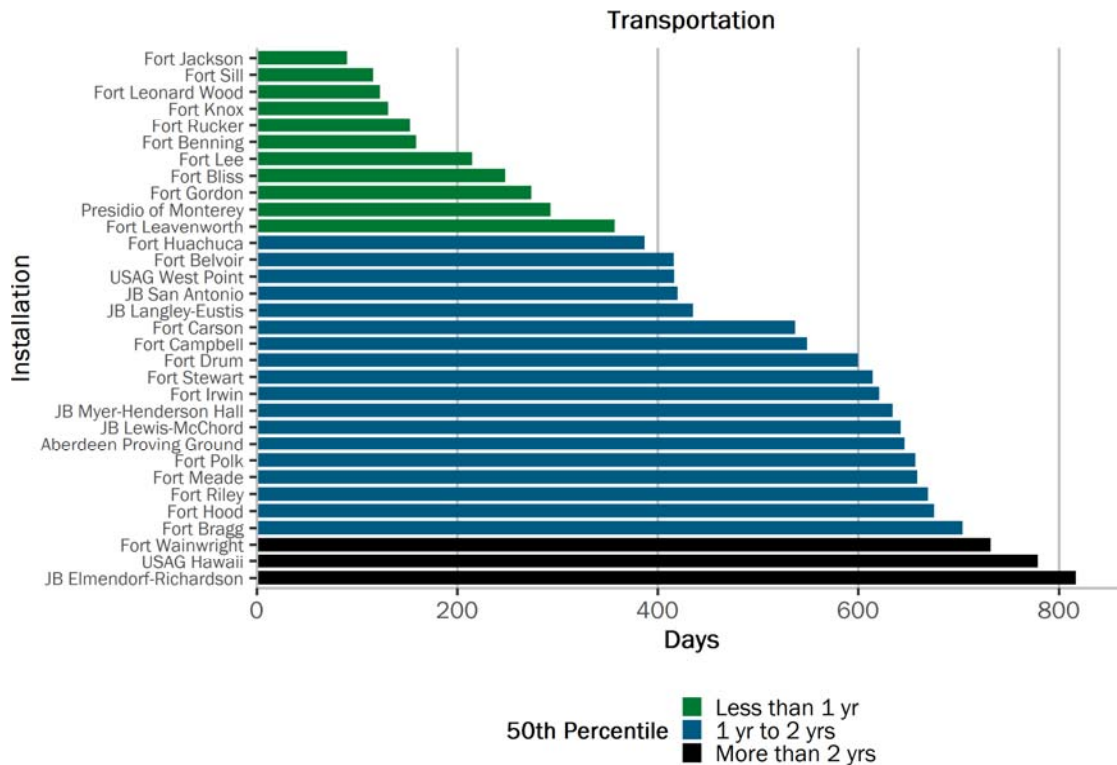

Figure 42. Transportation CMF Assignment Durations for 32 CONUS Army Installations

The second format of results presents the 50th and 90th percentiles for assignment durations (days) for each CMF within a PMD at each installation. Results for the 32 CONUS Army installations in this study are shown in Figures 43–75.

As an explanation, Figure 43 shows the 50th and 90th percentiles for the 18 CMFs in each of the 3 PMDs (Operations, Operations Support, and Force Sustainment Division) for Aberdeen Proving Ground. The CMFs are listed in order of the shortest time spent (median number of days) within a PMD at Aberdeen Proving Ground. In the Operations Division, the Armor CMF spends the shortest time (~100 days) and the Artillery CMF spends the longest time (~400 days) at Aberdeen Proving Ground. In the Operations Support Division, the Engineer CMF spends the shortest time and Chemical CMF spends the longest time (800 days). In the Force Sustainment Division, the Ordnance CMF spends the shortest time and the Health Services CMF spends the longest time (720 days). The 90th percentile of time spent by each CMF is also provided. Similar explanations of results for the other 31 installations apply to Figures 44–74. Overall, the 50th and 90th percentiles of assignment durations for each CMF represent

foundational data of the length of time (days) that each CMF spends at that installation. These percentiles provide temporal metrics for personnel in CMFs at Army installations to support a variety of assessments including those by human resource planners and environmental health specialists.

7.2 Assignment Path Analysis

The assignment path analysis focused on development of statistical descriptions of assignment durations at Army installations throughout time increments of military service (e.g., 5 years, 10 years). Key groupings of assignment paths were achieved by analyzing the duration of assignments at installations in chronological order from entry throughout specified increments of time. A combinatorial analyses approach evaluated assignment durations over time to generate groups of paths based on frequency of assignments at installations to determine a hierarchy of chronologically explicit assignment paths over a 5- or 10-year period. The resulting sequence of assignments and associated duration statistical descriptions provide common paths of assignments at installations during military service. The incremental assignment durations at a given installation over a period of time is the key metric for this analysis. The analysis is independent of progression in rank or changes in career management field over the period of an assignment path.

Based on previous screening of personnel assignment records (see paragraph 6.3), an additional subset of records was selected for the assignment path analysis based on completeness of assignment duration information in chronological order and that covered a minimum of 5 years of military service. Also, an assignment duration of a minimum of 30 days at a given installation was required for inclusion in this analysis. The resulting dataset of approximately 60,000 records provided the basis for the assignment path analysis.

7.2.1 5-Year Assignment Path Results

To determine most common assignment durations at installations for a 5-year period of military service, individual records were ordered chronologically to provide a sequence of assignments at installations and their corresponding lengths of time. The median duration (years) of assignment at each installation was calculated as the key metric and the results analyzed across 32 CONUS Army installations to generate common assignment paths.

Figure 75 shows the 25 most common paths based on the combination of assignment durations at installations for a 5-year period of military service. For a 5-year period of military service, the most common assignment path is the combination of Fort Benning (0.8 years) followed by Fort Bragg (4.2 years) for duty assignment (9.2% of total paths). The second most common assignment path is 5-year assignment at Fort Benning and the third most common assignment path is Fort Bragg (5 years). The fourth and fifth most common assignment paths consist of 0.5 years at Fort Leonard Wood and 0.5 years at Fort Sill followed by 4.5 years at Fort Bragg for a 5-year period as shown in Figure 75. (Note: Table B-3 shows the percent of total paths for the 25 assignment paths shown in Figure 75. There are numerous other assignment paths not shown in the figure with each path < 1.5% of the total paths). Overall, these assignment paths and their associated temporal metrics at installations provides foundation information on the common assignment paths of Army personnel for a variety of assessments including those by human resource planners and environmental health specialists.

Figure 75. Assignment Paths for 5-Year Period of Military Service
(Ordered by most common)

7.2.2 10-Year Assignment Path Results

To determine most common assignment durations at installations for a 10-year period of military service, individual records were ordered chronologically to provide a sequence of assignments at installations and their corresponding lengths of time. The median duration (years) of assignment at each installation was calculated as the key metric and the results analyzed across 32 CONUS Army installations to generate common assignment paths.

Figure 76 shows the 25 most common assignment paths based on the combination of assignment durations at installations for a 10-year period of military service. For a 10-year period of military service, the most common assignment path is the combination of Fort Benning (1.7 years) followed by Fort Bragg (8.3 years) of duty assignments (5.3% of total paths). The

second most common assignment path is 10-year duration at Fort Benning (4.7% of total) and the third most common assignment path is Fort Bragg (3.3% of total). The fourth most common assignment path is the combination of Fort Benning (0.5 year) followed by Fort Bragg (6.5 years) then back to Fort Benning (3 years). The fifth most common assignment path is the combination of Fort Benning (0.5 year) followed by Fort Bragg (3 years) followed by JB Lewis-McChord (6.5 years). The 12th most common assignment path is the combination of Fort Benning (0.5 year) followed by Fort Bragg (2 years) followed by Fort Campbell (4.5 years) and then back to Fort Bragg (3 years). (Note: Table B-3 shows the percent of total paths for the 25 assignment paths shown in Figure 76. There are numerous other assignment paths not shown in the figure with each path < 1.5% of the total paths). Overall, these assignment paths and their associated temporal metrics at installations for a 10-year period of military service provide foundational data to support a variety of assessments including those by human resource planners and environmental health specialists.

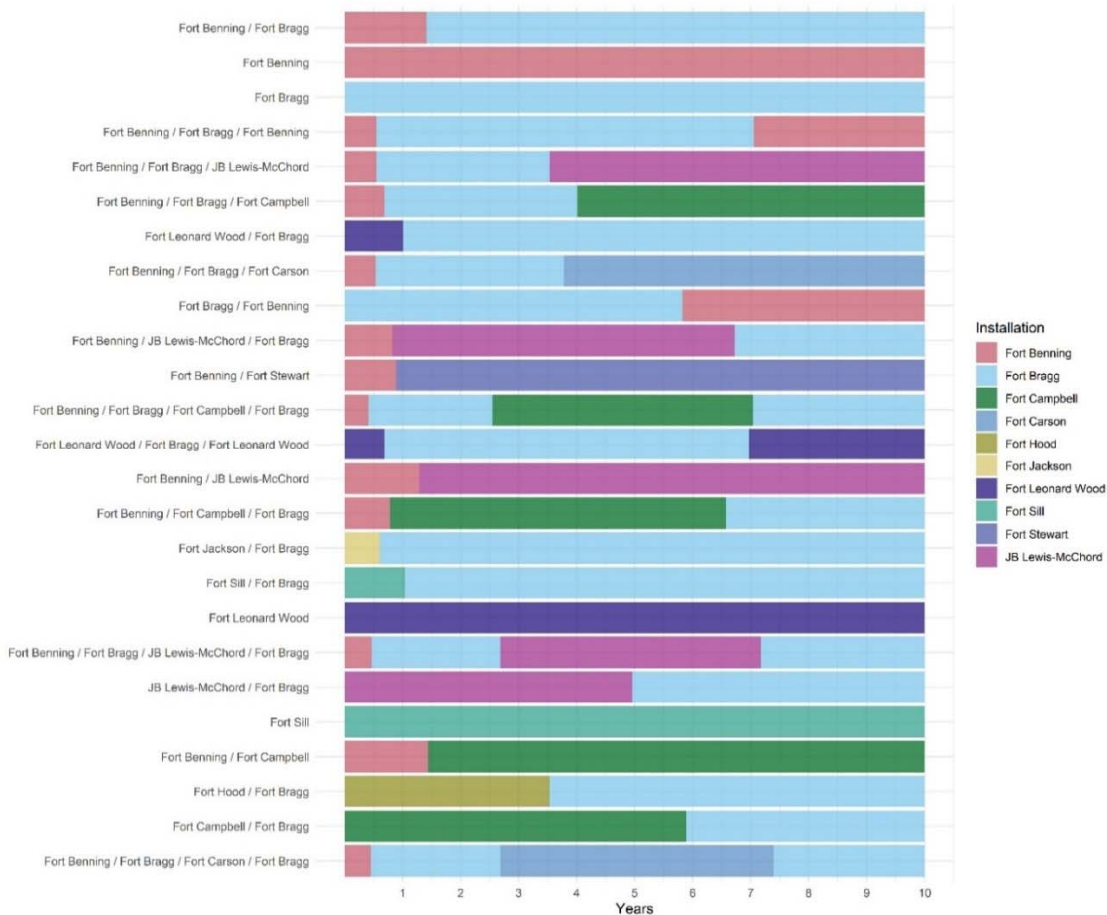

Figure 76. Assignment Paths for 10-Year Period of Military Service (Ordered by most common)

7.2.3 Total Time Assigned at Installations

Assignment path analysis also included evaluation of the total time personnel are stationed at each of the 32 CONUS Army installations in this study. The assignment path dataset was statistically analyzed to determine median assignment durations at each installation for the total length of military service. Figure 77 is a plot of the statistical descriptions of the total time stationed at each of the 32 CONUS Army installations in this study. Results are presented as box plots with the median number of years stationed at that installation as the vertical line in the box with quartiles at each end of the box. The circles on the plot are statistical outliers but indicate the total length of time some personnel spend at each installation. The installations in Figure 77 are listed in descending order of median time personnel are stationed at each installation with the longest median time at the top. The longest median assignment duration for this study was at Fort Bragg with median time of 2.8 years when considering the total period of military service (Figure 77). Also, some personnel spend more than 15 years at Fort Bragg, Fort Campbell, JB Lewis-McChord, and Fort Bliss as some personnel have multiple assignments at a given installation. Multiple assignments at an installation are included in the total time at an installation. The shortest median assignment duration for this study was at Fort Jackson with median time spent of 0.5 year when considering the total period of military service.

Figure 77. Total Time Stationed at Installations

7.3 Supporting Information

- Information and data on deployed personnel were not included in the assignment duration analyses for this study. As the primary data for this study covered the period of 2000–2018, there are known data quality issues with the Contingency Tracking System that precluded accurate identification of deployment durations. Considering the inability to account for deployment durations in the PTIP analyses may result in assignment durations at some CONUS installations being longer at those installations and some of the duration statistical descriptions will tend to be conservative.
- As all analyses for this study are maintained in APHC-PTIP work area within PDE, the project-specific datasets, analyses, and results are available to support other studies conducted by Army or DOD programs.
- Table B-1 presents the summary statistics of personnel assignment durations by Army rank groups for 32 CONUS Army installations. Table B-2 presents the summary statistics of personnel assignment durations by Army CMF for 32 CONUS Army. Table B-3 presents the summary statistics for assignment path analysis.

8. CONCLUSIONS

8.1 Installation Level Analysis

Statistical descriptions of personnel assignment durations at 32 CONUS Army installations were developed in several formats to provide temporal metrics for groups of Army personnel. The 50th percentile metric represents the assignment duration (median number of days) that personnel in groups aggregated by rank and career management field spend at each installation. Likewise, other assignment duration percentiles (90th) represent the length of time groups aggregated by rank and career management field spend at that installation. Statistical descriptions also include quartiles of assignment durations. The resulting temporal metrics of personnel assignment durations at the installation level provide foundational data to support a variety of assessments including those by human resource planners and environmental health specialists.

8.2 Assignment Path Analysis

Assignment path analysis developed statistical descriptions of assignment durations at Army installations throughout time increments of military service (e.g., 5 years, 10 years). Key groupings of assignment paths were achieved by analyzing the duration of assignments at installations in chronological order from entry throughout specified increments of time. A combinatorial analyses approach evaluated assignment durations over time to generate groups of paths based on frequency of assignments at installations to determine a hierarchy of chronologically explicit assignment paths over a 5- or 10-year period of military service. The resulting sequence of assignments and associated duration statistical descriptions provide common paths of assignments at installations during military service.
