

Chlamydia Trachomatis Infection

Clinical Description:
An infection characterized by urethritis, epididymitis, cervicitis, acute salpingitis, or other syndromes when sexually transmitted. Infections are often asymptomatic in women. Perinatal infections may result in inclusion conjunctivitis and pneumonia in newborns. Other syndromes caused by *C. trachomatis* include lymphogranuloma venereum and trachoma.

Critical Reporting Elements and Comments:
- Report co-infections with other organisms, like gonorrhea, separately as individual RMEs.
NOTE: Complete a STI Risk Survey when interviewing the patient.
